this book describes recent technological developments in next generation nuclear reactors that have created renewed interest in nuclear process heat for industrial applications the author s discussion mirrors the industry s emerging focus on combined cycle next generation nuclear plants ngnp seemingly natural fit in producing electricity and process heat for hydrogen production to utilize this process heat engineers must uncover a thermal device that can transfer the thermal energy from the ngnp to the hydrogen plant in the most performance efficient and cost effective way possible this book is written around that vital quest and the author describes the usefulness of the intermediate heat exchanger ihx as a possible solution the option to transfer heat and thermal energy via a single phase forced convection loop where fluid is mechanically pumped between the heat exchangers at the nuclear and hydrogen plants is presented and challenges associated with this tactic are discussed as a second option heat pipes and thermosyphons with their ability to transport very large quantities of heat over relatively long distance with small temperature losses are also examined
