this is a revised updated and significantly augmented edition of a classic carus monograph a bestseller for over 25 years on the theory of functions of a real variable earlier editions of this classic carus monograph covered sets metric spaces continuous functions and differentiable functions the fourth edition adds sections on measurable sets and functions the lebesgue and stieltjes integrals and applications the book retains the informal chatty style of the previous editions remaining accessible to readers with some mathematical sophistication and a background in calculus the book is thus suitable either for self study or for supplemental reading in a course on advanced calculus or real analysis not intended as a systematic treatise this book has more the character of a sequence of lectures on a variety of interesting topics connected with real functions many of these topics are not commonly encountered in undergraduate textbooks e g the existence of continuous everywhere oscillating functions via the baire category theorem the universal chord theorem two functions having equal derivatives yet not differing by a constant and application of stieltjes integration to the speed of convergence of infinite series this book recaptures the sense of wonder that was associated with the subject in its early days it is a must for mathematics libraries

this book links two subjects algebraic geometry and coding theory it uses a novel approach based on the theory of algebraic function fields coverage includes the riemann rock theorem zeta functions and hasse weil s theorem as well as goppa s algebraic geometric codes and other traditional codes it will be useful to researchers in algebraic geometry and coding theory and computer scientists and engineers in information transmission
