this new book tackles two crucial questions first how does religion in its various forms and manifestations influence world politics second how will adding religion to the discourse on international relations modify our theoretical understanding each of these leading authors addresses different aspects of these questions in different contexts providing a diverse and multifaceted view of the topic susanna pearce and tanja ellingsen examine the religious causes of conflict on the macro level several of the contributors focus on specific conflicts the gaurav ghose and patrick james examine the kashmir conflict from the pakistani perspective and carolyn james and ozgur ozdamar examine it from the indian perspective similarly hillel frisch examines the palestinian israeli conflict from the palestinian perspective and jonathan rynchold examines it from the israeli perspective finally two of the authors examine other important issues stuart cohen examines the evolution of the religious view of war in the jewish tradition and yehudit auerbach examines whether can play a role in conflict resolution and reconciliation these assessments deliver fascinating conclusions this book was previously published as a special issue of terrorism and violence

this authored monograph covers a viability to approach to traffic management by advising to vehicles circulated on the network the velocity they should follow for satisfying global traffic conditions it presents an investigation of three structural innovations the objective is to broadcast at each instant and at each position the advised celerity to vehicles which could be read by auxiliary speedometers or used by cruise control devices namely 1 construct regulation feedback providing at each time and position advised velocities celerities for minimizing congestion or other requirements 2 taking into account traffic constraints of different type the first one being to remain on the roads to stop at junctions etc 3 use information provided by the probe vehicles equipped with gps to the traffic regulator 4 use other global traffic measures of vehicles provided by different types of sensors these results are based on convex analysis intertemporal optimization and viability theory as mathematical tools as well as viability algorithms on the computing side instead of conventional techniques such as partial differential equations and their resolution by finite difference or finite elements algorithms the target audience primarily covers researchers and mathematically oriented engineers but the book may also be beneficial for graduate students

this book describes the development of an innovative solution for electrified roadway pavements based on engineered cementitious composites which are exhibiting an extreme

tensile strain capacity that is much higher than conventional concrete this enables the pavement to work without steel reinforcement and to embed a dynamic wireless power transfer technology for charging electric vehicles at first the book presents a modified performance driven design approach to improve the composites to achieve the optimum pavement design in terms of functional and structural performance it shows that the modified composites can be used to fulfil the safety and comfort factors without neglecting the characteristics of conventional ones further 3d finite element and fluid dynamics models are used to analyse the pavement properties the validated model predict the functional performance including skid resistance surface water drainage and noise in the remaining part of the thesis an environmentally friendly photocatalytic function for pavement made of engineered cementitious composites is investigated in turn a multi criteria design analysis is proposed to identify the optimum functional performance of the pavements all in all this book reports on a comprehensive approach to design analyse and optimize engineered cementitious composites for electrified road pavement application a special emphasis is given on applications in singapore and other tropical megacities

science aims at the discovery of general principles of special kinds that are applicable for the explanation and prediction of the phenomena of the world in the form of theories and laws when the phenomena themselves happen to be general the principles involved assume the form of theories and when they are particular they assume the form of general laws theories themselves are sets of laws and definitions that apply to a common domain which makes laws indispensable to science understanding science thus depends upon understanding the nature of theories and laws the logical structure of explanations and predictions based upon them and the principles of inference and decision that apply to theories and laws laws and theories can differ in their form as well as in their content the laws of quantum mechanics are indeterministic or probabilistic for example while those of classical mechanics are deterministic or universal instead the history of science reflects an increasing role for probabilities as properties of the world but also as measures of evidential support and as degrees of subjective belief our purpose is to clarify and illuminate the place of probability in science

this topical textbook outlines conflict crisis and war as central challenges in the international security arena exploring their history evolution nature dynamics and trends patrick james and james m scott discuss the major approaches to analysing conflict crisis and war and identify the key avenues for managing them

translating the vast amount of information in the field of international relations into knowledge requires a greater emphasis on communication beyond the use of text given the challenges posed by existing and intensifying information overload patrick james calls for a new vision of progress with a solid foundation in the philosophy of inquiry and through graphic representation of cause and effect in his new book realism and international relations patrick james gives us the most comprehensive reassessment of realism since the classic works of vasquez when translated into a graphic format that facilitates comparative analysis realist theories collectively have much to contribute to scientific progress

this edited collection of essays answers a basic question posed by contemporary discourse on state building how might people s identification with a particular ethnic group matter essays in this book use an integrated multi disciplinary approach to understanding regional and local community culture and socio political development in developing countries especially in sub saharan africa to argue that the state as well as civil society confers on cultural differences a legitimacy that can be achieved in no other way but by positive cooperation contributors from different countries look at local patterns in state building and modernization as they have unfolded over the course of the last fifty years they claim that the people and ethnic groups in most developing countries adhere to a concept of popular sovereignty that testifies that aspects of positive and moral ethnicity can contribute to social change as in china economic development as in india or in a democratization process as in rwanda and burundi the eventual methodological assumption made by these essays presumes that ethnic conflicts in such countries as cyprus turkey india and rwanda have no moral sanction ethnicity has not assumed a political ideology one conclusion reached by the contributors is that some form of accommodation between opposing ethnically diversified groups as well as between state and ethnic elements is feasible
