this book presents attitudes information and tools for a holistic approach to

medicine health and mental health in our discussions among ourselves and with the contributing authors we defined three aspects of a holistic approach first such an approach involves expanding our focus to include the many personal familial social and environmental factors that promote health prevent illness and encourage healing second a holistic approach views the patient as an individual person not as a symptom bearing organism this attitude emphasizes the self responsibility of the person for his or her health and the importance of mobilizing the person s own health capacities rather than treating illness only from the outside third the holistic approach tries to make wise use of the many diagnostic treatment and health modalities that are available in addition to the standard materia medica including alternative medical and healing systems as well as psychological techniques and physical modalities some of these methods of treatment and health practices are already accepted others are accepted but not applied in practice and still others need further research to explore the range of their uses

the clinical approaches to the chronic degenerative diseases that drain our resources and compromise our well being have become almost exclusively symptom focused the common wisdom is that they are idiopathic with final outcomes to be managed rather than prevented or cured that they are potentially reversible rarely enters into any discussion b

systemicity is receiving wider attention thanks to its evident paradox on the one hand it occurs as a problem with complex symptoms on the other it is sought after as an approach for dealing with the non linear reality of the world at once problem and prize systemicity continues to confound this book details the mechanics of this paradox as they arise from human epistemological engagement with the world guided by an original analysis of the fundamental idea of emergent property thinking through systems thinking uncovers the distinct significance but also incompleteness of the systems approach as a theory of human epistemological engagement the incompleteness is treated through a non eclectic interdisciplinary investigation which meets ten distinctly developed criteria required of any potential interdisciplinary partner to systems thinking there results a theory of knowledge an epistemology which is systemic in both senses of the term it belongs to the general systems movement and it is systemically structured the systems movement is thus offered a distinct epistemological voice which can compete on equal ground with other philosophical epistemological positions in true systemic fashion this theory of knowledge also offers methodological ethical and existential implications
