uv vis spectroscopy is one of the oldest methods in molecular spectroscopy the definitive formulation of the bouguer lambert beer law in 1852 created the basis for the quantitative evaluation of absorption measurements at an early date this led firstly to colorimetry then to photometry and finally to spectrophotometry this evolution ran parallel with the development of detectors for measuring light intensities i e from the human eye via the photo element and photocell to the photomultiplier and from the photo graphic plate to the present silicon diode detector both of which allow simultaneous measurement of the complete spectrum with the development of quantum chemistry increasing attention was paid to the correlation between light absorption and the structure of matter with the result that in recent decades a number of excellent discussions of the theory of electronic spectroscopy uv vis and luminescence spectroscopy have been published consequently this extremely interesting aspect of molecular spectroscopy has dominated the teaching of the subject both in my own lectures and those of others however it is often overlooked that in addition to the theory applications of spectroscopic methods are of particular interest to

scientists for this reason a lecture series about electronic spectroscopy given in the institute for physical chemistry at the heinrich heine university in dusseldorf was supplemented by one about uv vis spectroscopy and its applications this formed the basis of the present book

this book is intended as an introductory text it starts at the very fundamentals of the interaction of light and matter and progresses through the laws of light absorption instrumentation and standards to the newer chemometric techniques other chapters cover colour structural aspects of uv spectroscopy detection in high performance liquid chromatography and fluorescence

ultraviolet visible spectroscopy or ultraviolet visible spectrophotometry uv vis or uv vis refers to absorption spectroscopy or reflectance spectroscopy in the ultraviolet visible spectral region this means it uses light in the visible and adjacent near uv and near infrared nir ranges the absorption or reflectance in the visible range directly affects the perceived color of the chemicals involved in this region of the electromagnetic spectrum molecules undergo electronic transitions this technique is complementary to fluorescence spectroscopy in that fluorescence deals with transitions from the excited state to the ground state while absorption measures transitions from the ground state to the excited state

second volume of a 40 volume series on nanoscience and nanotechnology edited by the renowned scientist challa s s r kumar this handbook gives a comprehensive overview about uv visible and photoluminescence spectroscopy for the characterization of nanomaterials modern applications and state of the art techniques are covered and make this volume essential reading for research scientists in academia and industry in the related fields

the inspiration for this volume lies in edisbury s practical hints for absorption spectrometry which was published 17 years ago dr edisbury was a founding member of the photoelectric spectrometry group served as its first secretary and edited the bulletin for many years his wisdom humour and pragmatism was evident in early meetings of the group and in the first issues of the bulletin and these qualities were distilled in the writing of practical hints in 1977 the committee of the group which by then had been re named the uv spectrometry group decided to make use of the expertise available amongst the members of the group in writing some monographs on the practice of uv and visible spectrometry working parties were set up which formulated and produced the first two volumes of the series on standards in absorption spectrometry and standards in fluorescence spectrometry the success of these volumes lead the present committee of the group to set up a new working party in 1981 to plan a modern version of edisbury s book the idea really caught fire at the first meeting of the working party when ideas

sufficient to fill ten volumes were put forward we would not pretend to emulate edisbury's unique style but hoped to produce a readable book for the newcomer to uv visible absorption spectrometry and perhaps to improve the technique of more experienced users

molecular structure and functional group presence in organic paint and coating materials typically are determined using infrared spectroscopy evaluating the electronic structure of the binders such as the degree of conjugated double or triple bonds and degree of aromaticity may be evaluated using the more energetic ultraviolet uv visible vis spectroscopy dyes some colorants and aromatic solvents may be evaluated as well uv vis radiation energizes the electrons within the molecule while infrared radiation causes physical movement of portions of the molecular structure the use of electromagnetic radiation emr for the analysis of paints and coatings is best addressed by looking at the way this energy source is absorbed by the system under investigation most emr analytical techniques and the instruments used to affect the measurement will place the sample of known thickness in the beam of the light the objective in this case is to determine the difference in the strength of the light beam before it enters the sample and the strength after emerging from the sample this energy difference at a particular wavelength energy provides information about the absorbing species concentration and or chemical makeup with some recent technology the emerging beam may be reflected from a surface there are many sophisticated instruments that use emr and they operate from the lowest energy bands in microwaves to the highest energy rays the region of the spectrum most commonly used in the paint laboratory lies within the infrared and uv bands the instrumentation operative in this region can be relatively low cost and the information that can be obtained about concentration and molecular structure often is very useful
