presents numerical methods for reservoir simulation with efficient implementation and examples using widely used online open source code for researchers professionals and advanced students this title is also available as

open access on cambridge core

the 29th european symposium on computer aided process engineering contains the papers presented at the 29th european symposium of computer aided process engineering escape event held in eindhoven the netherlands from june 16 19 2019 it is a valuable resource for chemical engineers chemical process engineers researchers in industry and academia students and consultants for chemical industries presents findings and discussions from the 29th european symposium of computer aided process engineering escape event

many leading experts contribute to this follow up to an introduction to reservoir simulation using matlab gnu octave user guide for the matlab reservoir simulation toolbox mrst it introduces more advanced functionality that has been recently added to the open source mrst software it is however a self contained introduction to a variety of modern numerical methods for simulating multiphase flow in porous media with applications to geothermal energy chemical enhanced oil recovery eor flow in fractured and unconventional reservoirs and in the unsaturated zone the reader will learn how to implement new models and algorithms in a robust efficient manner a large number of numerical examples are included all fully equipped with code and data so that the reader can reproduce the results and use them as a starting point for their own work like the original textbook this book will prove invaluable for researchers professionals and advanced students using reservoir simulation methods this title is available as open access on cambridge core

this volume collects together the presentations at the eighth international conference on foundations of computer aided process design focapd 2014 an event that brings together researchers educators and practitioners to identify new challenges and opportunities for process and product design the chemical industry is currently entering a new phase of rapid evolution the availability of low cost feedstocks from natural gas is causing renewed investment in basic chemicals in the oecd while societal pressures for sustainability and energy security continue to be key drivers in technology development and product selection this dynamic environment creates opportunities to launch new products and processes and to demonstrate new methodologies for innovation synthesis and design focapd 2014 fosters constructive interaction among thought leaders from academia industry and government and provides a showcase for the latest research in product and process design focuses exclusively on the fundamentals and applications of computer aided design for the process industries provides a fully archival and indexed record of the focapd14 conference aligns the focapd series with the

this conference proceeding gather a selection of peer reviewed papers presented at the 1st international conference on artificial intelligence for smart community aisc 2020 held as a virtual conference on 17 18 december 2020 with the theme re imagining artificial intelligence ai for smart community to apply computational intelligence for biomedical instruments automation control and smart community to develop suitable solution for various real world application the conference virtually brought together researchers scientists engineers industrial professionals and students presenting important results in the related field of healthcare technology soft computing technologies iot evolutionary computations automation and control smart manufacturing and smart cities researchers and scientist working in the allied domain of artificial intelligence and others will find the book useful as it will contain some latest computational intelligence methodologies and applications

a comprehensive mathematical and computational modeling of co₂ geosequestration and compressed air energy storage energy and environment are two interrelated issues of great concern to modern civilization as the world population will soon reach eight billion the demand for energy will dramatically increase intensifying the use of fossil fuels ut

this text details papers presented at a conference for all those involved in the application development and research of multiphase technology topics covered include field measurements separation boosting and metering and modelling

the production of carbon dioxide from the oxidation of fossil carbon over the past 200 years has resulted in the accumulation of co₂ in the atmosphere co₂ like other greenhouse gases slows the rate at which infrared radiation is emitted from the earth by increasing the concentration of co₂ in the atmosphere humanity is altering the earth s radiation balance in potentially dangerous way mitigating humanity s impact on earth s climate system requires transforming the global energy infrastructure to decrease anthropogenic emissions of co₂ the body of work presented here covers a range of physical and chemical topics important for the mitigation of anthropogenic climate change through the capture and storage of carbon dioxide this book is focused primarily on addressing co₂ emissions from large stationary point sources through co₂ capture and storage a portion of the work however is aimed at addressing the long tail of the co₂ point sources distribution by removing co₂ directly from the atmosphere the entire ccs supply chain from the thermodynamic limit of the work required the capture
