introduction to maintenance repair and overhaul of aircraft engines and components
brings together the basic aspects of a fundamentally important part of the aerospace

industry the one that supports the global technical efforts to keep passenger and cargo planes flying reliably and safely over time aircraft components and structural parts are subject to environmental effects such as corrosion and other types of material deterioration wear and fatigue such parts could fail in service and affect the safe operation of the aircraft if the degradation were not detected and addressed in time regular planned maintenance supports the current and future value of the aircraft by minimizing the physical decline of the aircraft and engines throughout its life introduction to maintenance repair and overhaul of aircraft engines and components was written by the industry veteran shevantha k weerasekera an aerospace engineer with 20 years of aircraft maintenance experience who currently leads the engineering team of a major technical enterprise in the field

aircraft maintenance repair and overhaul mro corporations provide two types of service light and heavy maintenance typical mro problems are related to scheduled and unscheduled aircraft maintenance because of the large number of components and parts that need a lead in time for delivery and the consequent scheduling of work this paper focuses on the significant causes of such problems affecting mro operations it addresses three major factors as follows oems maintenance schedule and manpower and turnaround time by a systematic review and analysis of scientific literature sources it is shown that aviation industry standards do not permit aircraft to be scheduled unless they are maintained according to and comply with the stringent standards related to airworthiness what seems to be important is effective maintenance schedule planning since this reduces time and cost and enables aircraft to be maintained in a short time unfortunately light maintenance remains beyond the control of airlines because no time allowance is programmed into flight schedules for such events vs increase the number of flight schedule per day
