in this second edition of endings beginnings routledge 2006 herbert j schlesinger explores endings and beginnings within psychoanalysis and psychoanalytic therapy both the obvious main endings and beginnings of any course in treatment and the many little endings and beginnings that permeate analysis the second edition contains new chapters including one on transference and counter transference as sources of information about the process of therapy and as sources of difficulty in ending it deals especially with the impact of prospective ending on the therapist which if not understood and well handled might interfere with working through and impede termination if not ending itself another new chapter deals with the difficulties in terminating with especially narcissistic patients one of the main criticisms against psychoanalysis and the psychotherapies derived from it is that it lacks criteria for when the patient has had enough herbert j schlesinger shows how we may view the process as a series of episodes each with an ending and possibly with a new beginning he presents the way patients signal even

before they are aware of it that ending is in the air and how it organizes how they experience the therapy if alerted the therapist can make use of these signals to locate self and patient in the process so informed the therapist is better able to discern when the therapy should end and help the patient work through the issues of separation and loss to terminate the treatment constructively all patients tend to end psychotherapy in the way they end all other relationships in several chapters on the problems related to severe regression therapists can learn how to help vulnerable patients for whom attachment is problematic deal with separation non traumatically in endings beginnings 2nd edition the theory of the continuous experience of ending and beginning and the array of landmarks that parse the clinical process are distinct advances to the technique of psychoanalysis and the psychotherapies derived from it schlesinger offers many clinical examples of ending and beginning with their technical problems and solutions this contribution to the technique of ending and beginning psychotherapy electively will be useful to practicing psychotherapists and psychoanalysts and to undergraduate and post graduate students in clinical psychology psychiatry and social work

a general introduction to psychoanalysis introductory lectures on psycho analysis sigmund freud translated by g stanley hall these twenty eight lectures to laymen are elementary and almost conversational freud sets forth with a frankness almost startling the difficulties and limitations of psychoanalysis and also describes its main methods and results as only a master and originator of a new school of thought can do these discourses are at the same time simple and almost confidential and they trace and sum up the results of thirty years of devoted and painstaking research while they are not at all controversial we incidentally see in a clearer light the distinctions between the master and some of his distinguished pupils part 1 the psychology of errors first lecture introduction second lecture the psychology of errors third lecture the psychology of errors continued fourth lecture the psychology of errors conclusion part 2 the dream fifth lecture difficulties and preliminary approach sixth lecture hypothesis and technique of interpretation seventh lecture manifest dream content and latent dream thought eighth lecture dreams of childhood ninth lecture the dream censor tenth lecture symbolism in the dream eleventh lecture the dream work twelfth lecture analysis of sample dreams thirteenth lecture archaic remnants and infantilism in the dream fourteenth lecture wish fulfillment fifteenth lecture doubtful points and criticism part 3 general theory of the neuroses sixteenth lecture psychoanalysis and psychiatry seventeenth lecture the meaning of the symptoms eighteenth lecture traumatic fixation the unconscious nineteenth lecture resistance and suppression twentieth lecture the sexual life of man twenty first lecture development of the libido and sexual organizations twenty second lecture theories of development and regression

this is the second book in the pioneering investigation of adult development by robert a nemiroff and calvin a colarusso the first adult development a new dimension in psychodynamic theory and practice arrived to critical acclaim in 1981 it presented a psychodynamic theory of development during the second half of life and a model of normal adult functioning this book is the logical sequel expanding and elaborating the original formulations and applying them to the clinical practice of psychotherapy and psychoanalysis nemiroff and colarusso demonstrate that these are appropriate techniques for patients in the second half of life regardless of age they lay to rest many stereotypes and myths that have long interfered with the dynamic treatment of older patients and they propose exciting new conceptualizations such as that of adult developmental arrests the genetic approach reaches beyond childhood and adolescence and takes on important new meaning by incorporating an adult developmental past that influences both psychopathology and transference the relationship between theory and therapy is richly demonstrated in the clinical presentations including ten detailed case histories of patients between the ages of 40 and 60 these and other clinical discussions provide ample evidence that a psychodynamic approach that is based on a sound adult developmental psychology can be extraordinarily effective they also demonstrate both the similarities and differences in working with older versus younger patients this work is a major contribution in a long neglected dimension of clinical psychiatry sherwyn m

adulthood which is made sense of with the help of tomkins theory demos concludes with a look at competing approaches to theory and responds to recent cognitive based attempts to disprove both tomkins work and the latest findings from neuroscience the affect theory of silvan tomkins for psychoanalysis and psychotherapy will appeal to psychoanalysts and psychoanalytic psychotherapists as well as psychiatrists psychologists social workers and psychiatric nurses

some years ago i began to receive letters from readers of my books all these letters contained one question what i had been doing after i had written my books which were published in english in 1920 and 1931 and had been written in 1910 and 1912 i could never answer these letters it would have needed books even to attempt to do this but when the people who wrote to me lived in london where i lived after 1921 i invited them and arranged courses of lectures for them in these lectures i tried to answer their questions and explain what i had discovered after i had written my two books and what was the direction of my work in 1934 i wrote five preliminary lectures which gave a general idea of what i was studying and also of the lines along which a certain number of people were working with me to put all that in one or even in two or three lectures was quite impossible so i always warned people that it was not worth while hearing one lecture or two but that only five or better ten lectures could give an idea of the direction of my work these lectures have continued since then and throughout this time i have often corrected and rewritten them on the whole i found the general arrangement satisfactory five lectures were read in my presence or without me listeners could ask questions and if they tried to follow the advice and indications given them which referred chiefly to self observation and a certain self discipline they very soon had a quite sufficient working understanding of what i was doing i certainly recognised all the time that five lectures were not sufficient and in talks that followed them i elaborated and enlarged the preliminary data trying to show people their own position in relation to the new knowledge i found that the chief difficulty for most people was to realise that they had really heard new things that is things that they had never heard before they did not formulate it for themselves but in fact they always tried to contradict this in their minds and translate what they heard into their habitual language whatever it happened to be and this certainly i could not take into account i know that it is not an easy thing to realize that one is hearing new things we are so accustomed to the old tunes and the old motives that long ago we ceased to hope and ceased to believe that there might be anything new and when we hear new things we take them for old or think that they can be explained and interpreted by the old it is true that it is a difficult task to realize the possibility and necessity of quite new ideas and it needs with time a revaluation of all usual values i cannot guarantee that you will hear new ideas that is ideas you never heard before from the start but if you are patient you will

very soon begin to notice them and then i wish you not to miss them and to try not to interpret them in the old way
