the international symposium on distributed computing and artificial intelligence 2013 dcai 2013 is a forum in which applications of innovative techniques for solving complex problems are presented artificial intelligence is changing our society its application in distributed environments such as the internet electronic commerce environment monitoring mobile communications wireless devices distributed computing to mention only a few is continuously increasing becoming an element of high added value with social and economic potential in industry quality of life and research this conference is a stimulating and productive forum where the scientific community can work towards future cooperation in distributed computing and artificial intelligence areas these technologies are changing constantly as a result of the large research and technical effort being undertaken in both universities and businesses the exchange of ideas between scientists and technicians from both the academic and industry sector is essential to facilitate the development of systems that can meet the ever increasing demands of today s society this edition of dcai brings together past experience current work and promising future trends associated with distributed computing artificial intelligence and their application in order to provide efficient solutions to real problems this symposium is organized by the bioinformatics intelligent system and educational technology research group bisite usal es of the university of salamanca the present edition was held in salamanca spain from 22nd to 24th may 2013

this multidisciplinary book analyses the contradictory coexistence of consumerism and environmentalism in contemporary japan it focuses on the dilemma that the diffusion of the concepts of sustainability and recycling has posed for everyday consumption practices and on how these concepts have affected and were affected by the production and consumption of art special attention is paid to the changes in consumption practices and environmental consciousness among the japanese public that have occurred since the 1990s and in the aftermath of the earthquake tsunami and nuclear disasters of march 2011

people are becoming more aware of the environment and their impact on it over the past decades we have become an increasingly consumerist based society from a world in which recycling was common single use became the norm this throwaway society is unsustainable sustainable gardening results in the creation of an environmentally friendly area in which natural predators thrive and soils are naturally replenished discover innovative and simple ways of recycling everything from water to materials in the garden practical examples show recycling in action turning unwanted items into useful features such as bottle edging footpaths made from tyres garden forks into table lamps broken pottery to mosaics and tree roots into lush garden stumperies recycling reusing and upcycling in the garden can make a difference helping you save money by using less water making your own compost choosing energy efficient equipment and by giving everyday items a totally new function instead of a throwaway society we are increasingly looking at ways of reducing our use of increasingly scarce resources turning plastic into paths using solar energy and conserving water natural recycling of plant material and sustainable gardening is increasingly popular this book helps search for creative ideas that can conserve resources and save you money water is no longer cheap so the book suggests many ways that you can re use water and get free rainwater the book helps you with places you may not think of looking for free and cheap material such as reclamation yards factories restaurants and hospitals let your imagination run free without needing much skill and without breaking the bank
