ever since charles darwin first published the origin of species on november 24 1859 the subject of origins has been one of the most controversial topics around sadly it also is a subject that is fraught with erroneous theories and concepts most students today are taught that organic evolution is not a theory but a fact that all reputable scientists accept disclaimers from the evolutionary community notwithstanding such a claim is quite simply wrong we believe it is time for someone to offer what renowned news commentator paul harvey would call the rest of the story that is what the truth about human origins does it tells the rest of the story as it discusses the scientific facts about mankind's beginning for example it investigates the record of the rocks as that record relates to human evolution it demonstrates how evolutionary theory is unable to explain things like the origin of gender and sexual reproduction the origin of language and communication the origin of the brain the mind and human consciousness and the origin of skin colors and blood types it also examines in an in depth fashion the so called molecular evidence of human evolution

discusses the scientific research which led to the theories of human origin including the contributions of charles darwin thomas henry huxley and louis leakey

excerpt down to the middle of the nineteenth century and to a considerable extent down to the present day the hebrew bible was held to be the sole and sufficient authority as to the early history of the human race 2 it was believed with a certainty

which made doubt impious that the first man adam was created in or about the year 4004 b c or not quite 6000 years ago and that all human and other life was destroyed by a universal deluge 1656 years later with the exception of noah and his wife their sons and their wives and pairs of all living creatures by whom the earth was repopled from the mountain peak of ararat as a centre the latest conclusions of modern science show that uninterrupted historical records confirmed by contemporary monuments carry history back at least 1000 years before the supposed creation of man and 2500 years before the date of the deluge and show then no trace of a commencement but populous cities celebrated temples great engineering works and a high state of the arts and of civilization already existing this is of the highest interest both as bearing on the dogma of the divine inspiration of the historical and scientific as distinguished from the moral and religious portions of the bible and on the still more important question of the true theory of man s origin and relations to the universe the so called conflict between religion and science is at bottom one between two conflicting theories of the universe the first that it is the creation of a personal god who constantly interferes by miracles to correct his original work the second that whether the first cause be a personal god or something inscrutable to human faculties the work was originally so perfect that the whole succession of subsequent events has followed by evolution acting by invariable laws the former is the theory of orthodox believers the latter that of men of science and of liberal theologians who 3 like bishop temple find that the theory of original impress is more in accordance with the idea of an omnipotent and omniscient creator to whom a thousand years are as a day than the traditional theory of a creator constantly interfering to supplement and amend his original creation by supernatural interferences

examines theories of evolution the great apes the origins of language extinct species and the global expansion that precipitated adaptation and diversity

what should the average person know about science because science is so central to life in the 21st century science educators and other leaders of the scientific community believe that it is essential that everyone understand the basic concepts of the most vital and far reaching disciplines human origins 101 does exactly that this accessible volume provides readers whether students new to the field or just interested members of the lay public with the essential ideas of the origins of humans using a minimum of jargon and mathematics concepts are introduced in a progressive order so that more complicated ideas build on simpler ones and each is discussed in small bite sized segments so that they can be more easily understood human origins 101 enables students and the general public to understand the basic concepts underlying our knowledge of our evolution as a species this small volume covers a brief history of

paleoanthropology and the discovery of human s place in nature evolution and the origin of life clues to human origins from genetics the fossil and archaeological records the distinctive traits that makes us human the diversity of modern humans with a bibliography glossary and discussion of hoaxes fringe theories and hot button issues human origins 101 provides the perfect starting point for anyone wishing to understand how scientists know how humans evolved

africa does not give up its secrets easily buried there lie answers about the origins of humankind and yet though vital clues still remain hidden scientists have over the last century transformed our understanding about the beginnings of human life in born in africa martin meredith follows scientists trail of discoveries about human origins recounting their intense rivalry personal feuds and fierce controversies as well as their feats of skill and endurance and he limns their momentous accomplishments scientists have identified more than twenty species of extinct humans they have firmly established africa as the birthplace not only of humankind but also of modern humans they have revealed how early technology language ability and artistic endeavour all originated in africa and they have shown how small groups of africans spread out from africa in an exodus sixty thousand years ago to populate the rest of the world

who are we where did we come from what makes us human the whole puzzle of our early life on earth is gradually being pieced together from fragments of bone skulls and primitive tools dispersed throughout the world the trail leads back nearly five million years here is a history of human evolution that reveals the very latest finds and thinking discoveries that can help us to understand our past our present and even future

this update to the award winning the origins of modern humans a world survey of the fossil evidence covers the most accepted common theories concerning the emergence of modern homo sapiens adding fresh insight from top young scholars on the key new discoveries of the past 25 years the origins of modern humans biology reconsidered allows field leaders to discuss and assess the assemblage of hominid fossil material in each region of the world during the pleistocene epoch it features new fossil and molecular evidence such as the evolutionary inferences drawn from assessments of modern humans and large segments of the neandertal genome it also addresses the impact of digital imagery and the more sophisticated morphometrics that have entered the analytical fray since 1984 beginning with a thoughtful introduction by the authors on modern human origins the book offers such insightful chapter contributions as africa the cradle of modern people crossroads of the old world late hominin evolution in western asia a river runs through it modern human origins in east asia perspectives on the origins of modern australians modern human origins in central europe the

makers of the early upper paleolithic in western eurasia neandertal craniofacial growth and development and its relevance for modern human origins energetics and the origin of modern humans understanding human cranial variation in light of modern human origins the relevance of archaic genomes to modern human origins the process of modern human origins the evolutionary and demographic changes giving rise to modern humans the paleobiology of modern human emergence elegant and thought provoking the origins of modern humans biology reconsidered is an ideal read for students grad students and professionals in human evolution and paleoanthropology

fascinating as engaging an explanation of how scientists study fossil bones as any i have ever read john r alden philadelphia inquirer in 1984 a team of paleoanthropologists on a dig in northern kenya found something extraordinary a nearly complete skeleton of homo erectus a creature that lived 1.5 million years ago and is widely thought to be the missing link between apes and humans the remains belonged to a tall rangy adolescent male the researchers called him nariokotome boy in this immensely lively book alan walker one of the lead researchers and his wife and fellow scientist pat shipman tell the story of that epochal find and reveal what it tells us about our earliest ancestors we learn that nariokotome boy was a highly social predator who walked upright but lacked the capacity for speech in leading us to these conclusions the wisdom of the bones also offers an engaging chronicle of the hundred year long search for a missing link a saga of folly heroic dedication and inspired science brilliantly captures an intellectual odyssey one of the finest examples of a practicing scientist writing for a popular audience portland oregonian a vivid insider's perspective on the global efforts to document our own ancestry richard e leakey

the text starts explaining the theory of evolution and further chapters discuss the human journey

this book evaluates the claims of scientific creationism versus materialistic evolution while examining other scenarios consistently philosophical in methodology and perspective the book is radically interdisciplinary in content examining data and arguments drawn from natural science philosophy and theology this work challenges the limits of human knowledge regarding every major question touching on human origins

50 000 years ago merely a blip in evolutionary time our homo sapiens ancestors were competing for existence with several other human species just as their own precursors had been doing for millions of years yet something about our species separated it from the pack and led to its survival while the rest became extinct so just what was it that allowed homo sapiens to become masters of the planet curator emeritus at the

american museum of natural history ian tattersall takes us deep into the fossil record to uncover what made humans so special surveying a vast field from initial bipedality to language and intelligence tattersall argues that homo sapiens acquired a winning combination of traits that was not the result of long term evolutionary refinement instead it emerged quickly shocking their world and changing it forever

recent genetic data showing that neanderthals interbred with modern humans have made it clear that deeper insight into the behavioral differences between these populations will be critical to understanding the rapid spread of modern humans and the demise of the neanderthals this volume which brings together scholars who have worked with faunal assemblages from europe the near east and africa makes an important contribution to our broader understanding of neanderthal extinction and modern human origins through its focus on variability in human hunting behavior between 70 25 000 years ago a critical period in the later evolution of our species

ten million years ago in tropical africa some large primates were finally forced to stand upright and walk on two feet this would form the beginnings of the human race this book tells the complete story of the human evolution and the development of mankind

in this lively and controversial book elaine morgan presents a challenging interpretation to the question of human evolution with brilliant logic she argues that our hominid ancestors began to evolve in response to an aquatic environment millions of years ago something happened that caused our ancestors to walk on two legs to lose their fur to develop larger brains and learn how to speak elaine morgan discovers what this event was by studying the many incongruous flaws in the physiological make up of humans the human body is liable to suffer from obesity lower back pain and acne in support of her aquatic ape hypothesis she points out the flaws in our physiological make up the difficulties of erect bipedalism our hairlessness and fat layers our preference for face to face sex and the way we breathe are these flaws a record of the history of the species the scars of evolution that are clues to earlier stages of evolution morgan establishes the origins of the evolutionary path that separated humans from other animals and questions the theories currently accepted by science did our ancestors adapt to an aquatic environment that subsequently dried out elaine morgan has made the aquatic ape hypothesis a plausible alternative to conventional theories of evolution and in the scars of evolution she brings a real understanding of who humans are and where they came from
