this book is about the construction of geometric sculptures using mainly building blocks and toy construction parts most of these geometric sculptures are already well known and have been mainly constructed in wood metal or plastic they are also popular as origami models only a few of these are my own discoveries i have chosen this as a media because it is easy to assemble without the preparation of materials as compared to using wood building blocks is excellent for prototyping for these projects your ideas can be realized with minimum effort and easy to make changes and trying out other designs i hope

you will have as much fun as i did in creating the sculptures and to solve problems during the assembly at times it is similar to solving a puzzle and it needs patience a good compilation is from a book orderly tangles by alan holden he use the term regular polylinks to describe these type of geometric linkages derived from polyhedra as regular polylinks become more widely known perhaps someone will discover significant applications for these beautiful mathematical objects by using this as a media to create sculptures and models will hopefully make these more easily accessible to all explore and have fun
