from the earliest periods of architecture and building architects actions have been conditioned by rules regulations standards and governance practices these range from socio cultural and religious codes seeking to influence the formal structure of settlement patterns to prescriptive building regulations specifying detailed elements of design in relation to the safety of building structures in architectural design and regulation the authors argue that the rule and regulatory basis of architecture is part of a broader field of socio institutional and political interventions in the design and development process that serve to delimit and define the scope of the activities of architects the book explores how

the practices of architects are embedded in complex systems of rules and regulations the authors develop the understanding that the rules and regulations of building form and performance ought not to be counterpoised as external to creative processes and practices but as integral to the creation of well designed places the contribution of architectural design and regulation is to show that far from the rule and regulatory basis of architecture undermining the capacities of architects to design they are the basis for new and challenging activities that open up possibilities for reinventing the actions of architects

architecture knowledge management akm aims to codify and maintain the architectural knowledge of a software system in a form that can be easily accessed by different

stakeholders integrating akm with an agile project management paradigm is a challenge because the agile philosophy downplays both plan driven development and documentation yet by integrating lightweight akm practices with the process agile software development could avoid maintenance and communication problems arising from scarce documentation in this chapter we introduce existing technologies that could be used as elements of lightweight akm for agile software development and present possible models to integrate akm with scrum which is the most popular agile approach in use today in particular we advocate the exploitation of architectural evaluations to collect architecturally significant information semiautomatically and the use of automated document generation to expose the contents of an architectural information repository in an easily accessible form the proposed models are based on observed architecting work practices in industry and on interviews carried out in industry to identify the architectural information flow in real life agile projects
