the language experience of children developing in linguistically diverse environments is subject to considerable variation both in terms of quantity and quality of language exposure it is an open question how to investigate language exposure patterns and more important which factors are relevant for successful language learning for example children acquiring a minority language including a signed language are exposed to less variety of input than children acquiring a more

global language this is because they are living in a smaller linguistic community and with fewer occasions to use the language in everyday life despite this reduced input most native signers are successful language learners in contrast native language competence is not always achieved in signing deaf children with hearing parents or those with cochlear implants learning a spoken language a similar outcome but with very different reasons has also been reported for hearing children with language impairment in these populations acquisition of morphosyntactic aspects is developing atypically ending with an uncomplete linguistic repertoire the circumstances of exposure during language development tend to differ in significant ways with respect to a large number of factors such as i length quality and quantity of input ii social status and attitudes toward the language iii cognitive abilities required for language learning and iv age of first exposure having early exposure to a range of different speakers is important in the acquisition of any language and may affect language proficiency however negative societal attitudes or a cognitive based disadvantage may create an unfavourable learning environment that prevents language learning from surfacing typically this situation inevitably generates a different type of exposure for the child and consequently different language competence in this research topic we intend to encourage the debate on social linguistic and cognitive factors at play for designing an effective environment for language acquisition aiming at integrating linguistic variables coming from theoretical studies on language with environmental variables such as measures of language input or cognitive abilities on functions ancillary to language development
