over the past thirty years the history of technology has been so extensively renewed that many once canonical narratives have been invalidated this collective work takes account of several of these major recompositions ancient periods were never eras of technical stagnation techniques are not diffused but interpenetrate and reinvent themselves as they travel invention is not an individual epiphany but a gradual and often collective process far from neutral the material is endowed with its own agentivity the notions of capitalism gender and the environment are fertile contributions to the history of techniques and have served to invalidate many naiveties these recent works have put an end to the discontinuous vision of a history made up of straightforward technical ruptures in favor of more complex descriptions that provide a better grasp of the real dynamics of today s world

this book is written for all technologists and engineers to those unfamiliar with forecasting it may appear a somewhat esoteric activity with little relevance to the everyday technical concerns of the reader this is not so the aim of this book is to show how forecasting can improve the quality of technical decision making furthermore this can be accomplished without the use of highly sophisticated techniques which can only be applied by specialists the approaches described in this book can be easily understood and used by all its readers
