this book integrates the microeconomics of trade with international finance and open  
economy macroeconomics the emphasis throughout is on international competition and the  
limits of trade policy economics began with a debate over tariffs domestic industries lobby  
for protection against foreign competitors or export subsidies government policy makers dole  
favours in return for cash and votes governments negotiate free trade agreements but  
disregard them when possible with tariffs export subsidies and other policies to influence  
foreign trade and investment the forces of international competition however eventually  
overwhelm government policy this text presents the critical issues of international trade and  
finance trade theory includes partial equilibrium market analysis neoclassical trade models  
constant cost production factor proportions production and models of industrial organization  
the text integrates concepts from international finance and the basic models of open  
economy macroeconomics the presentation uses graphs with numerical examples making  
the theory easier for students especially when combined with more general classroom  
presentation the text does not assume previous courses in intermediate economics or  
calculus but develops the theory with simple tools numerous questions give students  
confidence to use the theoretical models and concepts over 250 boxed examples illustrate
