this book is a remarkable contribution to the literature on dynamical systems and geometry it consists of a selection of work in current research on teichmüller dynamics a field that has continued to develop rapidly in the past decades after a comprehensive introduction the author investigates the dynamics of the teichmüller flow presenting several self contained chapters each addressing a different aspect on the subject the author includes innovative expositions all the while solving open problems constructing examples and supplementing with illustrations this book is a rare find in the field with its guidance and support for readers through the complex content of moduli spaces and teichmüller theory the author is an internationally recognized expert in dynamical systems with a talent to explain topics that is rarely found in the field he has created a text that would benefit specialists in not only dynamical systems and geometry but also lie theory and number theory

this volume contains the proceedings of the crm workshop on invariant subspaces of the shift operator held august 26 30 2013 at the centre de recherches mathématiques université de montréal montréal quebec canada the main theme of this volume is the invariant subspaces of the shift operator or its adjoint on certain function spaces in particular the hardy space dirichlet space and de branges rovnyak spaces these spaces and the action of the shift operator on them have turned out to be a precious tool in various questions in analysis such as function theory bieberbach conjecture rigid functions schwarz pick inequalities operator theory invariant subspace problem composition operator and systems and control theory of particular interest is the dirichlet space which is one of the classical hilbert spaces of holomorphic functions on the unit disk from many points of view the dirichlet space is an interesting and challenging example of a function space though much is known about it several important open problems remain most notably the characterization of its zero sets and of its shift invariant subspaces this book is co published with the centre de recherches mathématiques

this volume presents some of the research topics discussed at the 2014 2015 annual thematic program discrete structures analysis and applications at the institute for mathematics and its applications during fall 2014 when combinatorics was the focus leading experts have written surveys of research problems making state of the art results more conveniently and widely available the three part structure of the volume reflects the three workshops held during fall 2014 in the first part topics on extremal and probabilistic combinatorics are presented part two focuses on additive and analytic combinatorics and part three presents topics

in geometric and enumerative combinatorics this book will be of use to those who research combinatorics directly or apply combinatorial methods to other fields
